# Pass-Through Program

A small image of an Intel CPU chip is located in the top-left corner of the slide.

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glDrawArrays(GLenum(GL_TRIANGLES), 0, 3)
```

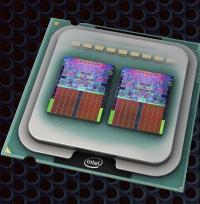

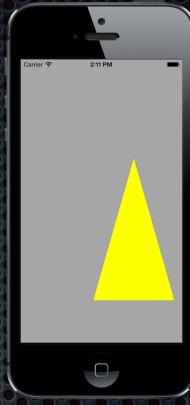

A 3D coordinate system diagram is shown in the top-left corner of the slide, featuring three intersecting axes (x, y, z) and a green triangle positioned in the first octant.

```
attribute vec2 position;
void main()
{
    gl_Position = vec4(position.x, position.y, 0.0, 1.0);
```

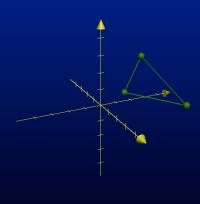

A bronze-colored statue of a rabbit is located in the bottom-left corner of the slide.

```
void main()
{
    gl_FragColor = vec4(0.0, 1.0, 0.0, 1.0);
```

# Uniform Program

A small image of an Intel CPU with two cores visible on the surface.

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glUniform2f(glGetUniformLocation(_program, "translate"), 0.4, -0.2)
glUniform4f(glGetUniformLocation(_program, "color"), 1.0, 1.0, 0.0, 1.0)
glDrawArrays(GL_TRIANGLES, 0, 3)
```

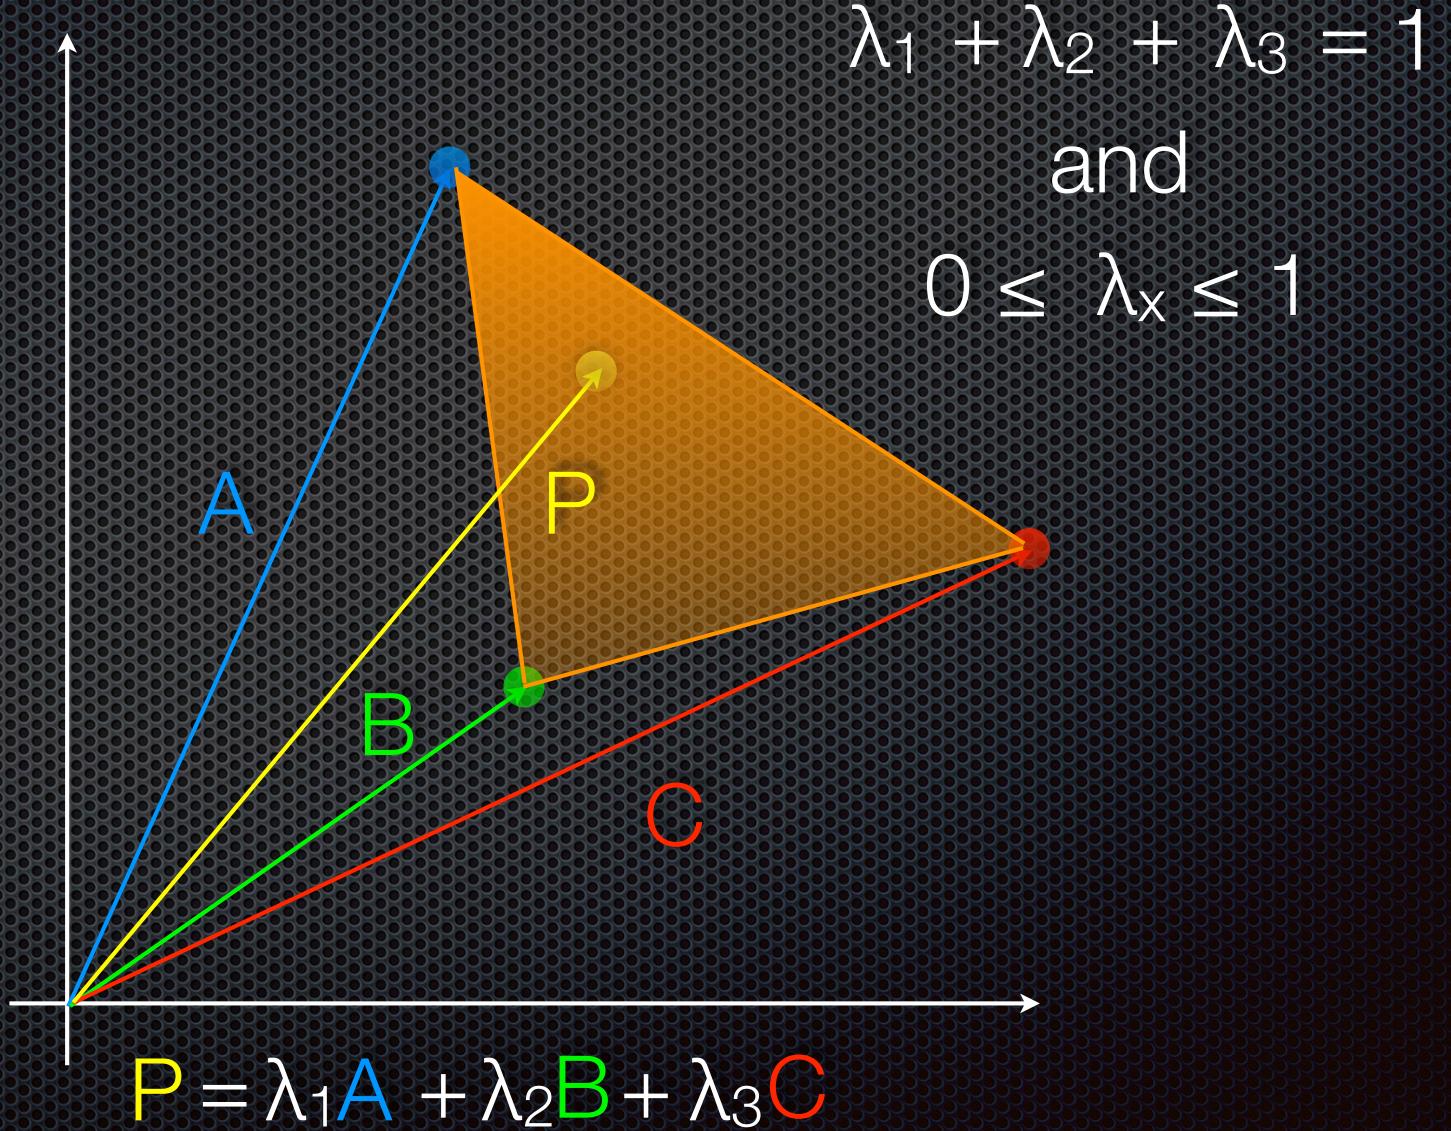

A 2D coordinate system with a red origin. Three green vertices of a triangle are plotted in the first quadrant. The triangle is drawn with green lines.

```
attribute vec2 position;
uniform vec2 translate;
void main()
{
    gl_Position = vec4(
        position.x + translate.x, position.y + translate.y, 0.0, 1.0);
}
```

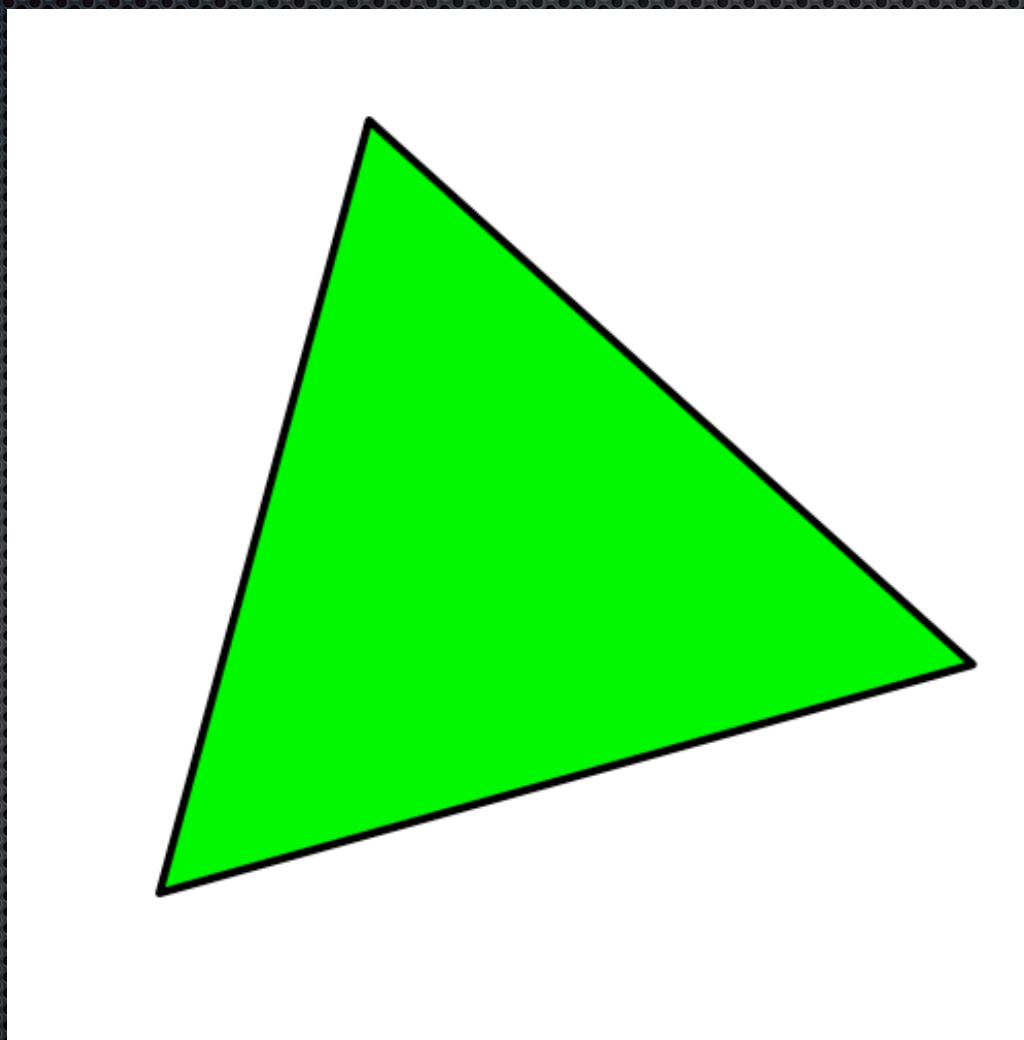

A 3D rendering of a brown rabbit sitting on a grassy field under a blue sky.

```
uniform highp vec4 color;
void main()
{
    gl_FragColor = color;
}
```

# Interpolation Program

A small image of an Intel CPU with two cores visible on the surface.

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glVertexAttribPointer(11, 4, GLenum(GL_FLOAT), GLboolean(FALSE), 0, colors)
glUniform2f(glGetUniformLocation(_program, "translate"), 0.4, -0.2)
glDrawArrays(GL_TRIANGLES), 0, 3) // colors array is 12 floats 0.0 -> 1.0
```

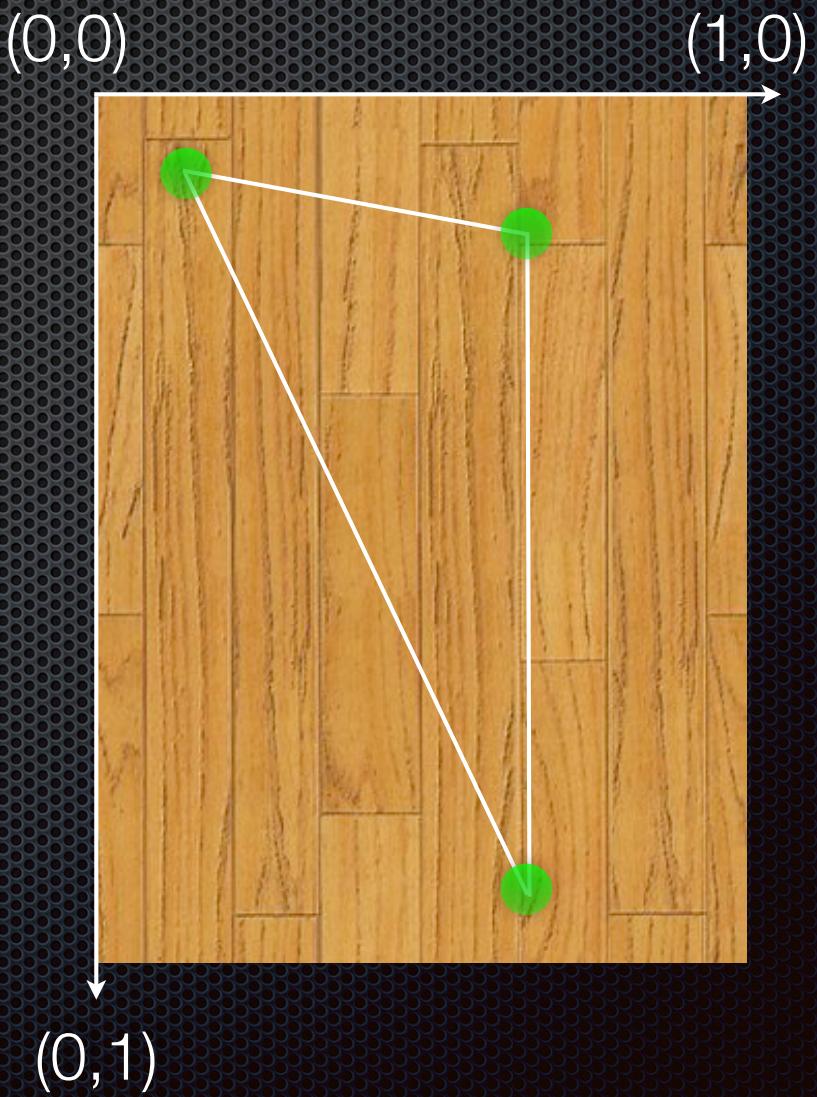

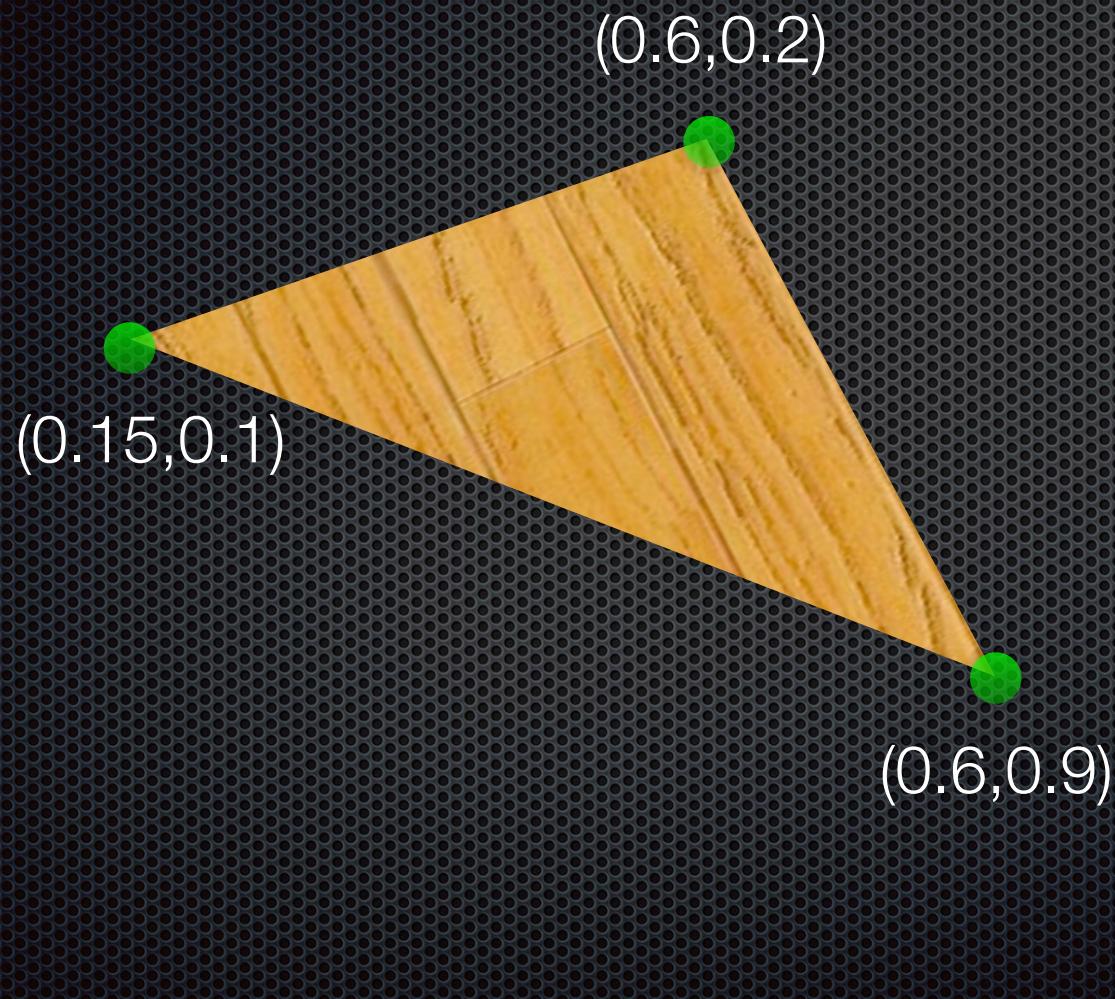

A 2D coordinate system with a grid. A triangle is drawn with vertices at (0,0), (1,0), and (0,1). Arrows point from the origin towards each vertex, indicating the direction of interpolation.

```
attribute vec2 position;
attribute vec4 color;
uniform vec2 translate;
varying vec4 colorInterpolated;
void main()
{
    gl_Position = vec4(
        position.x + translate.x, position.y + translate.y, 0.0, 1.0);
    colorInterpolated = color; // color data interpolated by rasterizer
}
```

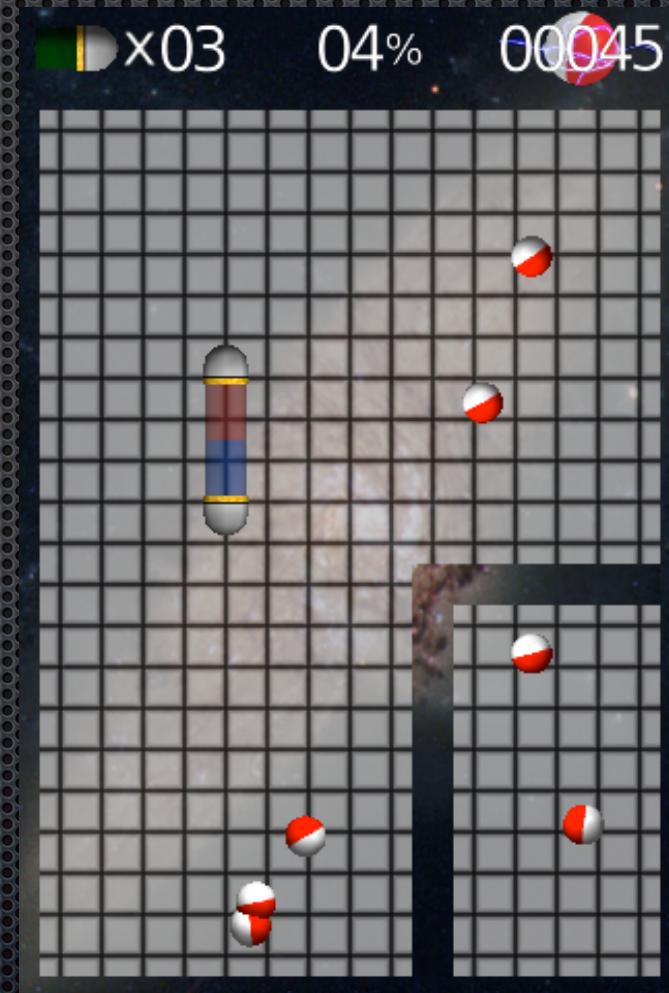

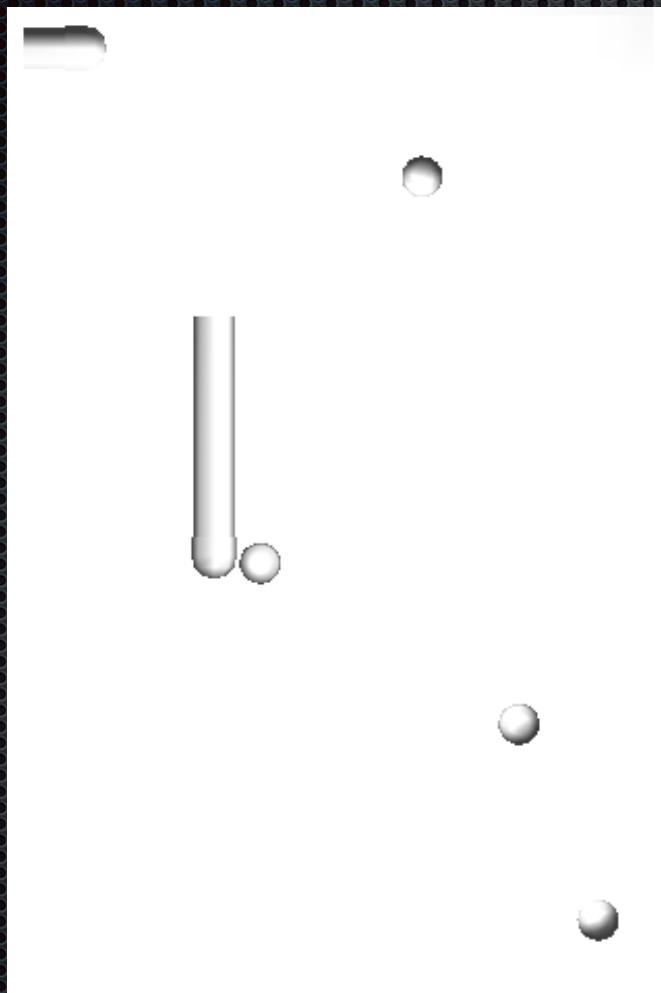

A small image of a brown rabbit sitting on a grassy field.

```
varying highp vec4 colorInterpolated;
void main()
{
    gl_FragColor = colorInterpolated;
}
```

# Texture Coordinates

# Texture Mapping

# Setting Up Texturing

```
// Setup texturing
var woodTextureInfo: GLKTextureInfo = GLKTextureLoader.textureWithCGImage(
    UIImage(named: "texture")?.CGImage, options: nil, error: nil)
// ...
glBindTexture(GLenum(GL_TEXTURE_2D), woodTextureInfo.name)
```

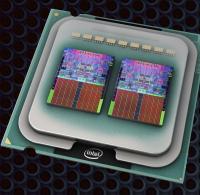

MUCH easier than it used to be!

# Swapping Textures

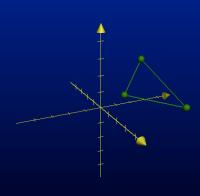

- Many textures can be loaded at one time
- Switch among loaded textures by calling `glBindTexture`
- Textures can be unloaded if there is insufficient memory
- Calling `glBindTexture` reloads the data automatically if it is not video memory resident

# Texturing Program

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glVertexAttribPointer(11, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, texCoords)
glUniform2f(glGetUniformLocation(_program, "translate"), 0.4, -0.2)
glBindTexture(GLenum(GL_TEXTURE_2D), _woodTextureInfo.name)
glDrawArrays(GL_TRIANGLES, 0, 3) // texCoords array has 6 floats 0.0 -> 1.0
```

```
attribute vec2 position;
attribute vec2 textureCoordinate;
uniform vec2 translate;
varying vec2 textureCoordinateInterpolated;
void main()
{
    gl_Position = vec4(
        position.x + translate.x, position.y + translate.y, 0.0, 1.0);
    textureCoordinateInterpolated = textureCoordinate; // interpolated
}
```

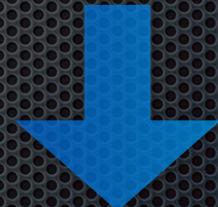

```
varying highp vec4 varyingTextureCoordinate;
uniform sampler2D textureUnit;
void main()
{ gl_FragColor = texture2D(textureUnit, varyingTextureCoordinate); }
```

# Alpha Blending

Problem: My sprites are all squares!

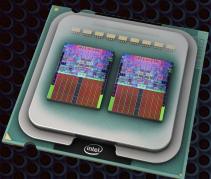

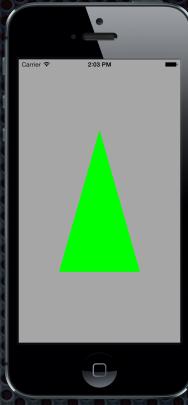

```
glEnable(GL_BLEND)
```

```
glBlendFunc(GL_SRC_ALPHA,  
           GL_ONE_MINUS_SRC_ALPHA)
```

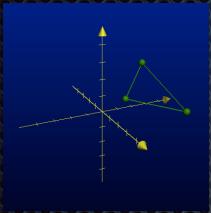

# Shader Program Comparison

# Pass-Through Program

A small image of an Intel CPU chip is located in the top-left corner of the slide.

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glDrawArrays(GLenum(GL_TRIANGLES), 0, 3)
```

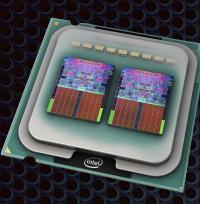

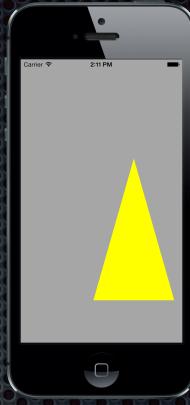

A 3D coordinate system diagram is shown in the top-left corner of the slide, featuring three intersecting axes (x, y, z) and a green triangle positioned in the first octant.

```
attribute vec2 position;
void main()
{
    gl_Position = vec4(position.x, position.y, 0.0, 1.0);
```

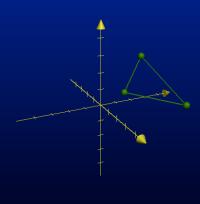

A bronze-colored statue of a rabbit (bunny) is located in the bottom-left corner of the slide.

```
void main()
{
    gl_FragColor = vec4(0.0, 1.0, 0.0, 1.0);
```

# Uniform Program

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glUniform2f(glGetUniformLocation(_program, "translate"), 0.4, -0.2)
glUniform4f(glGetUniformLocation(_program, "color"), 1.0, 1.0, 0.0, 1.0)
glDrawArrays(GL_TRIANGLES, 0, 3)
```

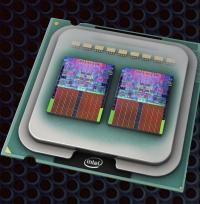

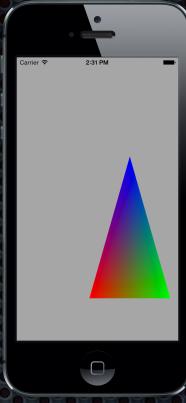

```
attribute vec2 position;
uniform vec2 translate;
void main()
{
    gl_Position = vec4(
        position.x + translate.x, position.y + translate.y, 0.0, 1.0);
}
```

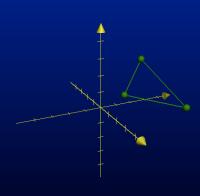

```
uniform highp vec4 color;
void main()
{
    gl_FragColor = color;
}
```

# Interpolation Program

A small image of an Intel CPU with two cores visible on the surface.

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glVertexAttribPointer(11, 4, GLenum(GL_FLOAT), GLboolean(FALSE), 0, colors)
glUniform2f(glGetUniformLocation(_program, "translate"), 0.4, -0.2)
glDrawArrays(GL_TRIANGLES), 0, 3) // colors array is 12 floats 0.0 -> 1.0
```

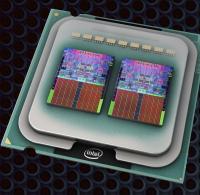

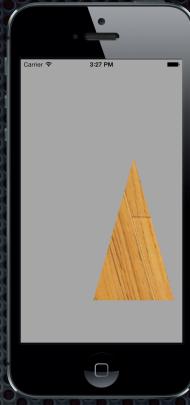

A 2D coordinate system with a grid. A triangle is drawn on the grid, with vertices at (0,0), (1,0), and (0,1). Arrows point from each vertex towards the center of the triangle, indicating the direction of interpolation.

```
attribute vec2 position;
attribute vec4 color;
uniform vec2 translate;
varying vec4 colorInterpolated;
void main()
{
    gl_Position = vec4(
        position.x + translate.x, position.y + translate.y, 0.0, 1.0);
    colorInterpolated = color; // color data interpolated by rasterizer
}
```

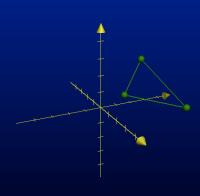

A small image of a brown rabbit sitting on a grassy field.

```
varying highp vec4 colorInterpolated;
void main()
{
    gl_FragColor = colorInterpolated;
}
```

# Texturing Program

```
glUseProgram(_program) // positions array has 6 floats between -1.0 -> 1.0
glVertexAttribPointer(10, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, positions)
glVertexAttribPointer(11, 2, GLenum(GL_FLOAT), GLboolean(FALSE), 0, texCoords)
glUniform2f(glGetUniformLocation(_program, "translate"), 0.4, -0.2)
glBindTexture(GLenum(GL_TEXTURE_2D), _woodTextureInfo.name)
glDrawArrays(GL_TRIANGLES, 0, 3) // texCoords array has 6 floats 0.0 -> 1.0
```

```
attribute vec2 position;
attribute vec2 textureCoordinate;
uniform vec2 translate;
varying vec2 textureCoordinateInterpolated;
void main()
