## View Frustum

Parameterized by: `glFrustum`

- left, right, top, bottom (generally symmetric)
- near, far

Or, when symmetric, by: `gluPerspective`

- Field of view (FOV), aspect ratio
- near, far

• Aspect ratio is the x/y ratio of the final displayed image. Common values:

- 4/3 for TV & old movies; 1.66 for cartoons & European movies; 16/9 for American movies & HDTV; 2.35 for epic movies

$$\text{aspect ratio} = \frac{\text{right} - \text{left}}{\text{top} - \text{bottom}} = \frac{\text{right}}{\text{top}}$$

$$\tan(\text{FOV} / 2) = \frac{\text{top}}{\text{near}}$$

## OpenGL

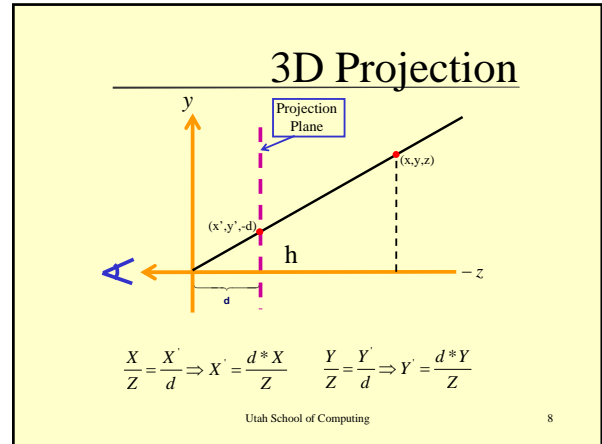

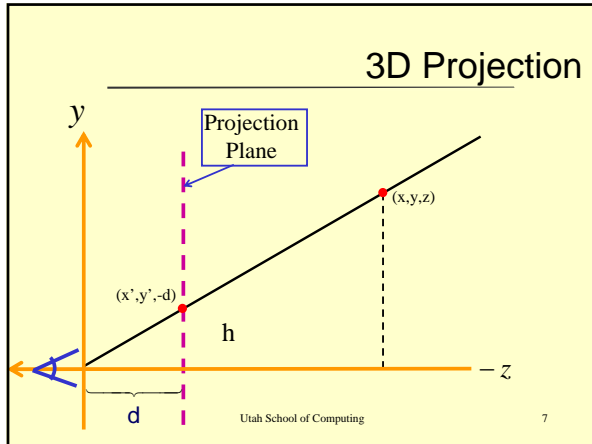

- `gluPerspective(...)`
  - Field of view in the y direction, *FOV*, (vertical field-of-view)
  - Aspect ratio, *a*, should match window aspect ratio
  - Near and far clipping planes, *n* and *f*
  - Defines a symmetric view volume
- `glFrustum(...)`
  - Give the near and far clip plane, and places where the other clip planes cross the near plane
  - Defines the general case
  - Used for stereo viewing, mostly

## gluPerspective to glFrustum

- As noted previously, `glu` functions don't add basic functionality, they are just more convenient
  - So how does `gluPerspective` convert to `glFrustum`?
  - Symmetric, so only need *t* and *l*

## Demo Projection Tutor

## Viewing System PDFs

### 3D Projection

$$\text{Proj} = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & \frac{1}{d} & 0 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \\ 1 \end{bmatrix} = \begin{bmatrix} x \\ y \\ z \\ \frac{z}{d} \end{bmatrix} = \begin{bmatrix} \frac{x * d}{z} \\ \frac{y * d}{z} \\ z \\ 1 \end{bmatrix}$$

Utah School of Computing 9

### 3D Projection

$$\text{Proj} = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & \frac{1}{d} & 0 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \\ 1 \end{bmatrix} = \begin{bmatrix} x \\ y \\ z \\ \frac{z}{d} \end{bmatrix} = \begin{bmatrix} \frac{x * d}{z} \\ \frac{y * d}{z} \\ z \\ 1 \end{bmatrix}$$

How many vanishing points?

Utah School of Computing 10

PDF of OpenGL projection

### Canonical to Window

- Canonical Viewing Volume (what is it?)
- To Window

$$M_{window} = \begin{bmatrix} \frac{n_x}{2} & 0 & 0 & \frac{n_x-1}{2} \\ 0 & \frac{n_y}{2} & 0 & \frac{n_y-1}{2} \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

$$M_{sys} = M_{window} M_{persp} M_{view}$$

### Complete Perspective Projection

- After applying the perspective matrix, we map the orthographic view volume to the canonical view volume:

$$M_{persp} = M_o M_p = \begin{bmatrix} \frac{2}{(r-l)} & 0 & 0 & \frac{(r+l)}{(r-l)} \\ 0 & \frac{2}{(t-b)} & 0 & \frac{(t+b)}{(t-b)} \\ 0 & 0 & \frac{2}{(n-f)} & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} n & 0 & 0 & 0 \\ 0 & n & 0 & 0 \\ 0 & 0 & (n+f) & -nf \\ 0 & 0 & 1 & 0 \end{bmatrix}$$

$$M_{sys} = M_{window} M_{persp} M_{view}$$

### Complete Perspective Projection

- After applying the perspective matrix, we map the orthographic view volume to the canonical view volume:

$$M_{persp} = M_o M_p = \begin{bmatrix} \frac{2}{(r-l)} & 0 & 0 & \frac{(r+l)}{(r-l)} \\ 0 & \frac{2}{(t-b)} & 0 & \frac{(t+b)}{(t-b)} \\ 0 & 0 & \frac{2}{(n-f)} & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} n & 0 & 0 & 0 \\ 0 & n & 0 & 0 \\ 0 & 0 & (n+f) & -nf \\ 0 & 0 & 1 & 0 \end{bmatrix}$$

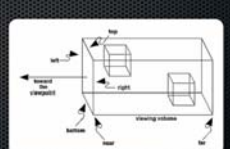

$$M_{sys} = M_{window} M_{persp} M_{view}$$

`glViewport()` `glFrustum()` `gluLookAt()`

### Full OpenGL Ortho Projection

ortho(l,r,b,t,n,f)

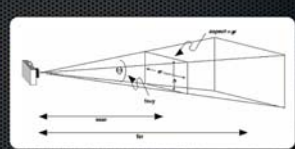

$$R = \begin{bmatrix} \frac{2}{r-l} & 0 & 0 & \frac{r+l}{r-l} \\ 0 & \frac{2}{t-b} & 0 & \frac{t+b}{t-b} \\ 0 & 0 & \frac{2}{n-f} & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \text{ and } R^{-1} = \begin{bmatrix} \frac{r-l}{2} & 0 & 0 & \frac{r+l}{2} \\ 0 & \frac{t-b}{2} & 0 & \frac{t+b}{2} \\ 0 & 0 & \frac{n-f}{2} & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

### Full OpenGL Perspective Proj

frustum(l,r,b,t,n,f)

$$R = \begin{bmatrix} \frac{2n}{r-l} & 0 & \frac{r+l}{r-l} & 0 \\ 0 & \frac{2n}{t-b} & \frac{t+b}{t-b} & 0 \\ 0 & 0 & \frac{2}{n-f} & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \text{ and } R^{-1} = \begin{bmatrix} \frac{r-l}{2n} & 0 & \frac{r+l}{2n} & 0 \\ 0 & \frac{t-b}{2n} & \frac{t+b}{2n} & 0 \\ 0 & 0 & \frac{n-f}{2} & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

### GL Matrix Example

```

// Clear screen
glClear(GL_COLOR_BUFFER_BIT, GL_DEPTH_BUFFER_BIT);

// Set up projection
glMatrixMode(GL_PROJECTION);
glLoadIdentity();
gluPerspective(fov, aspect, nearclip, farclip);

// Set up camera view
glMatrixMode(GL_MODELVIEW);
glLoadIdentity();
gluLookAt(eye.x, eye.y, eye.z, target.x, target.y, target.z, 0, 1, 0);

// Draw all objects
for(each object) {
    glPushMatrix();
    glTranslatef(pos[i].x, pos[i].y, pos[i].z);
    glRotatef(axis[i].x, axis[i].y, axis[i].z, angle[i]);
    Model[i]->Draw();
    glPopMatrix();
}

// Finish
glFlush();
glSwapBuffers();
    
```
