

- What was the objective of the study?
  
- What problem/question/hypothesis was investigated?
  
- What were the most convincing arguments to justify the study?
  
- Was relevant literature cited?
  
- Was experimental approach described well enough that it could be replicated?
  
- What were the major results?
  
- Could the tables and figures be understood in absence of text?
  
- How did the contents of the results and discussion sections differ?
  
- Were the conclusions consistent with results?
  
- What questions resulted from the research?
